

Dosch Texture Sources

Image material for medical visualization and character design

(January 31, 2008)

Dosch Design releases 15 products on DVD with images from female and male models for cosmetic and medical visualizations, advertisement and texture design of 3D characters. Each product contains over 200 photographs in extremely high resolution (5412 x 7216 pixel).

The products "Dosch Textures – Sources" provide images of 11 female and 4 male models. Included are many close-up shots of skin, hair, nails, eyes etc. – so they are a valuable source for any graphic designer and 3D artist. Use these extremely in-depth references to "paint" textures directly on 3D-models or use them in any image editing application to create significant illustrations or photo retouching.

Each product contains a PDF-overview, which presents the complete content of the DVD. All pictures can be used royalty-free within the terms of the Dosch Design license agreement.
