

## **3D models from DOSCH DESIGN provide Photoshop users with unlimited scope to realize their design**

*DOSCH DESIGN has developed a large number of 3D models especially for use with Photoshop*

(June 7, 2011) The developments in picture editing are considerable. The market leader Adobe has long-since established their supremacy in the third dimension and with Photoshop CS5, provides an excellent range of 3D functions, previously available only to the users of special 3D software. Photoshop users can now save themselves the time and money involved in the purchase and familiarization with a further 3D programme. You can now make full use of the opportunity for spatial creativity with your familiar software.

DOSCH DESIGN has worked to support these developments, reacting with the market launch of a large collection of 3D models designed especially for Photoshop (from version CS3 Extended and higher). "With our long history of developing computer graphic products for professional 3D users, we are happy to make our expertise available to photoshop users" says Sebastian Dosch, CEO from DOSCH DESIGN. Whether virtual vehicles, buildings, consumer durables or every-day objects, all 3D models have an excellent high-end render quality and can be changed to suit all wishes: scaling, rotating, positioning, illuminating - with the highest degree of flexibility, the use has complete freedom of action. For example, photographers can insert the models from DOSCH DESIGN directly into their photographed backgrounds. Virtual Photo Studios are available which allow the embellishment of products or packaging.

Three-dimensional depiction provides the user with countless new design possibilities, which can be used to great profit in his work. The 3D Photoshop models from DOSCH DESIGN have been designed specifically for photographers, packaging designers, illustrators, graphic designers or motion designers; indeed, anyone needing to work professionally with Photoshop and who wish to enrich their designs with top quality 3D models. Interested users receive free-of-charge taster files directly on the homepage.

All 3D models and a large number of license-free individual pictures are available at attractive prices at [www.doschdesign.com](http://www.doschdesign.com)
